

Dear Hiring Manager,

I'm excited to apply for the UX Designer role on the Google Health UX team. My work centers on designing scalable, user-centered products that operate at the intersection of complex systems, AI-enabled workflows, and high-stakes decision-making - an intersection that closely aligns with the future Google is building in health and wellness.

Over the past several years, I've led product design across complex, data-driven platforms where clarity, trust, and usability are essential. I'm comfortable shaping end-to-end experiences - from defining product vision and workflows to executing detailed visual and interaction design. My work consistently balances user needs, business goals, and technical constraints, particularly in environments where ambiguity and scale are core challenges.

I have hands-on experience designing AI-enabled features and workflows, including using AI-assisted prototyping to explore interaction models, validate assumptions, and accelerate iteration. I view AI not as a layer added at the end, but as a design material that must be carefully shaped to build user confidence, transparency, and motivation - especially in health-related contexts.

I'm deeply aligned with Google's user-first philosophy. I rely on user-centered design methods, research insights, and behavioral signals to inform design decisions, and I continuously challenge design effectiveness through iteration and measurement. I've partnered closely with researchers, engineers, and product managers to drive holistic design solutions that scale across products while maintaining accessibility, visual consistency, and craft.

In addition to execution, I regularly influence cross-functional stakeholders by clearly articulating design rationale, aligning teams around shared goals, and guiding design strategy across initiatives. I've also provided direction and mentorship to other designers, helping elevate quality and consistency across teams.

The opportunity to help shape AI-powered health experiences within Google Health - particularly as part of the next generation of the Fitbit app - is incredibly compelling. I'm motivated by work that empowers people to better understand themselves, make informed decisions, and build healthier habits through thoughtful, human-centered design.

Thank you for your time and consideration. I would welcome the opportunity to discuss how my experience can contribute to Google Health and the broader UX organization.

Sincerely,
Jake Maisel
